

VISITCOM™

State-Of-The-Art Visitation Communications

VisitCom™ Introduction

Public Sector Technologies' VisitCom™ is a state-of-the-art visitation communications system. It is unlike any other visitation telephone platform you have ever seen. Experience gained from manufacturing inmate telephone systems since 1988 led Public Sector Technologies to develop visitation communications that meet and exceed the expectations of correctional facility professionals.

Conversations are clear. Volume control helps reduce complaints. An automatic time duration limit can be set to assist with enforcement of visitation rules. If recording, monitoring and visitation call log capabilities are required, VisitCom™ telephones can be easily and economically connected to Public Sector Technologies' point and click recording administration system.

Additionally, if a correctional facility is utilizing Public Sector Technologies' RACTS ComLink™ inmate telephone system, then VisitCom™ telephones can be incorporated with that system so that recording and monitoring of visitation telephones and inmate telephones can be administered through a single system.

Features

- ▼ Heavy Gauge Steel Construction
- ▼ Armored Cord Handset (32")
- ▼ Chrome Hookswitch And Cradle Assembly
- ▼ Programmable Time Duration Limit With An Inter-Call Delay
- ▼ Volume Control
- ▼ Optional Recording and Monitoring Capabilities
- ▼ Optional Integration With Public Sector Technologies' RACTS ComLink™ Inmate Phone System

Specifications

Warranty: 18 months parts and labor

Dimensions: 5.5"W x 3"D x 10.75"H

Weight: 10 pounds per phone

Mounting: Mounting holes, located on the back of the phone, suitable for use with commercially available mounting hardware (i.e., wall bolts, wood screws, etc.)

Power Source Options: Four "C" cell batteries per pair of phones, one wall mount transformer per pair of phones, or line powered via a RACTS ComLink™ controller
